Subject: Prioritize nature-based solutions and basin-wide approach for Gulf Dead Zone and Mississippi River

Dear Katie Flahive,

Dear Gulf of Mexico Hypoxia Task Force,

I am a member of the 20,000-person strong 1 Mississippi River Citizen community. I call on the Gulf Hypoxia Task Force to

- 1) prioritize reducing the volume of chemicals like nitrogen and phosphorus going into the Mississippi River and its tributaries through robust agricultural practices like continuous living cover and other nature-based solutions to decrease the size of the Dead Zone and
- 2) prioritize a holistic, basin-wide approach to protecting and managing the Mississippi River.

The multiple benefits of nature-based solutions are well documented and are tools in the toolbox for government agencies, but they need to be utilized more. Celebrated examples of nature-based water quality improvement techniques are seen in the inter-agency Upper Mississippi River Restoration Program and the USACE's Engineering with Nature Initiative. Solutions like restoring wetlands and planting cover crops reduce nutrient pollution while mitigating the effects of extreme flooding and drought.

Our Mississippi River and the Gulf of Mexico are national treasures, and efforts to protect the basin and reduce hypoxia have fallen short for far too long. The people, land, water, and wildlife deserve better. We call on the Gulf Hypoxia Task Force to prioritize a holistic, basin-wide management approach and implement nature-based solutions to reduce nutrient pollution and decrease the size of the Gulf Dead Zone.

Sincerely,

Sincerely, Jean Ross 3624 Bryant Ave. S. Minneapolis, MN 55409

We call on the Gulf Hypoxia Task Force to prioritize a holistic, basin-wide management approach and implement nature-based solutions to reduce nutrient pollution and decrease the size of the Gulf Dead Zone.

Sincerely,

Let's make this happen, Gulf Hypoxia Task Force! Prioritize restoring wetlands, reconnecting floodplains, and implementing proven agricultural practices (like cover crops, buffer strips) that reduce pollution! We are counting on you! Thank you!

Sincerely, Michael Anderson 3949 29th Ave S. Minneapolis, MN 55406

Dear Katie Flahive,

Dear Gulf of Mexico Hypoxia Task Force,

I am a member of the 20,000-person strong 1 Mississippi River Citizen community. I call on the Gulf Hypoxia Task Force to

- 1) prioritize reducing the volume of chemicals like nitrogen and phosphorus going into the Mississippi River and its tributaries through robust agricultural practices like continuous living cover and other nature-based solutions to decrease the size of the Dead Zone and
- 2) prioritize a holistic, basin-wide approach to protecting and managing the Mississippi River.

The multiple benefits of nature-based solutions are well documented and are tools in the toolbox for government agencies, but they need to be utilized more. Celebrated examples of nature-based water quality improvement techniques are seen in the inter-agency Upper Mississippi River Restoration Program and the USACE's Engineering with Nature Initiative. Solutions like restoring wetlands and planting cover crops reduce nutrient pollution while mitigating the effects of extreme flooding and drought.

Our Mississippi River and the Gulf of Mexico are national treasures, and efforts to protect the basin and reduce hypoxia have fallen short for far too long. The people, land, water, and wildlife deserve better. We call on the Gulf Hypoxia Task Force to prioritize a holistic, basin-wide management approach and implement nature-based solutions to reduce nutrient pollution and decrease the size of the Gulf Dead Zone.

Sincerely,

Sincerely, Bronwyn Clark Skov 21327 Lillehei Ave Hastings, MN 55033

We call on the Gulf Hypoxia Task Force to prioritize a holistic, basin-wide management approach and implement nature-based solutions to reduce nutrient pollution and decrease the size of the Gulf Dead Zone.

Sincerely,

I live close to the Mississippi River in St Louis. What comes down the tributaries is a major problem that needs to be looked into. It starts from the top down.

Thank you for your attention on this critical issue.

Sincerely, Karla Pashia 5105 Suson Way Ct St. Louis, MO 63128

Sincerely,

I love to paddle the Mississippi near St. Cloud where it is clean, clear and full of mussels. Let's clean it up to Louisiana and the Gulf for health of the ecosystem and as a wonderful asset for recreation.

Sincerely, Marilynn Torkelson 8956 Braxton Dr Eden Prairie, MN 55347

Sincerely,

I am a native New Orleanian, and have seen the kinds of litter and trash that float on the edge of the Mississippi. It in unacceptable to see the way individuals, shipping interests, and industries have treated this vital waterway like a giant sewer.

Sincerely, Wendy King 2100 Saint Charles Ave Apt 9J New Orleans, LA 70130

Sincerely,

Here in Illinois where I live, constructed wetlands for tile treatment hold particular promise for reducing nutrient loss from farm fields. Details on this conservation practice here: www.smartwetlands.farm.

Thank you!

Vera Leopold
