Partnerships

"Cover crops are good for the soil, the water, and my bottom line."

Preserving and protecting our land and water resources is all of our responsibility. By developing an Agriculture Water Quality Plan and implementing best management practices, you can protect water quality and promote soil conservation on your farm. The result: a healthier environment for future generations, and a more profitable farm today. To learn how to develop your own ag water quality plan, go to eec.ky.gov/agwater.

DEVELOP AN AgWater QUALITY PLAN.
